To use VirtualBox instead of VMware, see how to DownloadsFirst, you'll want to download and install.

Earlier today, I posted an article to show you how to Some of the process is similar, but I'll walk you through installing MacOS Sierra on Windows using VMware Workstation 12 Player in this article.

Right-click on the file and select Make A Copy Then click on My Drive in the left menu and download the image from your drive.. If you have enough free space in your Google Drive, you can copy it into your Drive.. Next, you'll want to download the VMDK MacOS Sierra image (choose one of the options below).Google Drive (One Full);Google Drive (5 of 5);You'll also need to download the patch tools here;You'll probably get a message about the download limit has been reached.. After you download the image, open the rar file and extract the VMDK file
